WSTĘP

Usually every person is born in a family that cherishes, loves and takes care. People love their families and there is nothing better and more sensitive that relationship in the family. It is really a masterpiece and as every masterpiece it is immortal. It cannot die.

But it is a mistake to think that a family doesn't face any problems. "Happy families are all alike; every unhappy family is unhappy in its own way." - said Leo Tolstoy. Every family has its own skeletons from which almost all members of the family suffer.

There are no similar happy families and every family is unique and it is impossible to find two identical families. When two people are met the psychological relations appear and when people live together the family psychology appears. And every family has the unique psychology of relations. Unfortunately people make many mistakes that lead to the family destruction and troubles. It is impossible to advise how to become happy but it is possible to advise how to avoid troubles.

And almost every person who decides to create a family faces a lot of similar problems. The young family has its own difficulties and extended family suffers from its own troubles. And any family relations have lots of problems based on different difficulties for example bad financial situation or the death of one of the members of a family.

When people decide to get married they already pass through certain obstacles in their lives surviving and forming the family. Nevertheless when people start to live together they also face some problems that sometimes ruin a family, its members and relations. And it would be a mistake to think that a child is the cement that holds two people together. It is not true.

This is dedicated to the problems in the families and how to overcome these problems staying happy family without skeletons. Modern world offers so many opportunities that they must be used to develop the institution of marriage and family and not to ruin it. Lee Iacocca said "The only rock I know that stays steady, the only institution I know that works, is the family." So keep your family carefully.

Large families

What is a large family? Where possible (using the available data) the study defines children in families with four or more children (4+-child families) (10 per cent of all children) as living in
